

Recreation Ground – To consider the Groundsman’s weekly reports and agree actions

The Groundsman provides visual inspection reports are received on a weekly basis and include a photograph of the defibrillator.

In November the report identified defibrillator error message.

The ambulance service were advised and, as this was urgent, a new battery and pads have been installed. The overall cost was £295.69 excl. VAT.

Recommendation

The cost is retrospectively approved.

The weekly checklists from the Groundsman in December have only identified one new item, as follows:

Post needs replacing in wooden wall.

Recommendation

Not considered to be a H&S risk, so no immediate action proposed. Instead, wait until other timber works are required and instruct then.
